

Introducing DataConnect

All of your HORIZON[®] data, integrated into your system.

Our team of IT experts have developed a new functionality for HORIZON called DataConnect. The DataConnect service allows you to automatically import all of your HORIZON data into your system. Using this new functionality, you can better reach your business objectives, increase your return on investment, and prove the value of your program to your leadership team.

With DataConnect you can leverage your sample data to:

- Have greater visibility of your maintenance program
- Reduce training costs
- Quickly react to your fluid analysis results

To take advantage of the service, follow these simple steps:

Step 1: Discuss with your leadership team about how to take advantage of DataConnect with your existing systems.

Step 2: Submit your request for DataConnect by emailing custserv@eoilreports.com. Please include your IT contact so we can provide them with details.

Step 3: Our IT department will then provide information about connecting your system to DataConnect.
